MALICIOUS Overall verdict based on the Sophos deep learning model

Our model identifies many attributes of the file and compares their occurrence, individually and in different combinations, with millions of known good and known malware samples. The reports below show probabilities based on key components of the overall score. Each component isn't a strong indicator on its own but, in combination, they provide a critical insight. This model identifies many different characteristics of your file and compares the occurrence of those characteristics, individually and in combinations, across millions of known good and known malware samples.

Feature analysis

- Identifies specific features of the file.
- Randomly selects one million [out of 2,906,531] known good and one million [out of 20,045,125] known bad files.
- Counts the number of good and bad sample files that have the same features. These simple counts are shown in the graph below.
- The verdict may also take into account more complex combinations of features
- This test rates **file.exe** as **MALICIOUS**.

More likely in bad files >>>	<<< More likely in good files	File feature
6,747	5,292	Can access the registry: "RegDeleteKeyW"
30,962	31,332	[!] The program may be hiding some of its imports: "GetProcAddress"
23,868	22,093	[!] The program may be hiding some of its imports: "LoadLibraryA"
48,199	49,165	Stack Canary: "disabled"
122	30	Packer: "Unusual section name found: .vmp0"
108	24	Packer: "Unusual section name found: .vmp1"

Feature combinations

Sophos Central Firewall Management

New Group Management

- Group Firewall Management makes group policy changes easy
- Simply select “Manage Policy” and make changes using the familiar XG Firewall management UI
- Making changes to a firewall group are synchronized to all firewalls in the group
- Adding new firewalls to the group will fully synchronize them to the group policy

The screenshot displays the Sophos Central Firewall Management interface. The left sidebar shows the navigation menu with 'Firewall groups' selected. The main content area shows a table of firewall groups and individual firewalls. A context menu is open over the 'fw.toews.xyz' firewall, showing options: 'Manage Policy', 'Edit Group', and 'Delete Group'. The table columns are: NAME, SERIAL NUMBER, VERSION, MODEL, IP ADDRESS, STATE, ALERTS, and ACTIONS.

NAME	SERIAL NUMBER	VERSION	MODEL	IP ADDRESS	STATE	ALERTS	ACTIONS
Ungrouped							
Production Firewalls

Synchronized Security

SOPHOS

Endpoint and firewall Integration

1

Malware Detection

Sophos Endpoint detects a malware attack

2

Cross-Estate Communication

Sophos Endpoint shares infection status with the security system, triggering automatic responses

3

Device Isolation

XG Firewall instantly isolates the computer, preventing the attack from spreading, and communication with C2 servers.

Security Heartbeat™

5

Access Restored

XG Firewall restores network access. Root Cause Analysis provides detailed view of what happened.

4

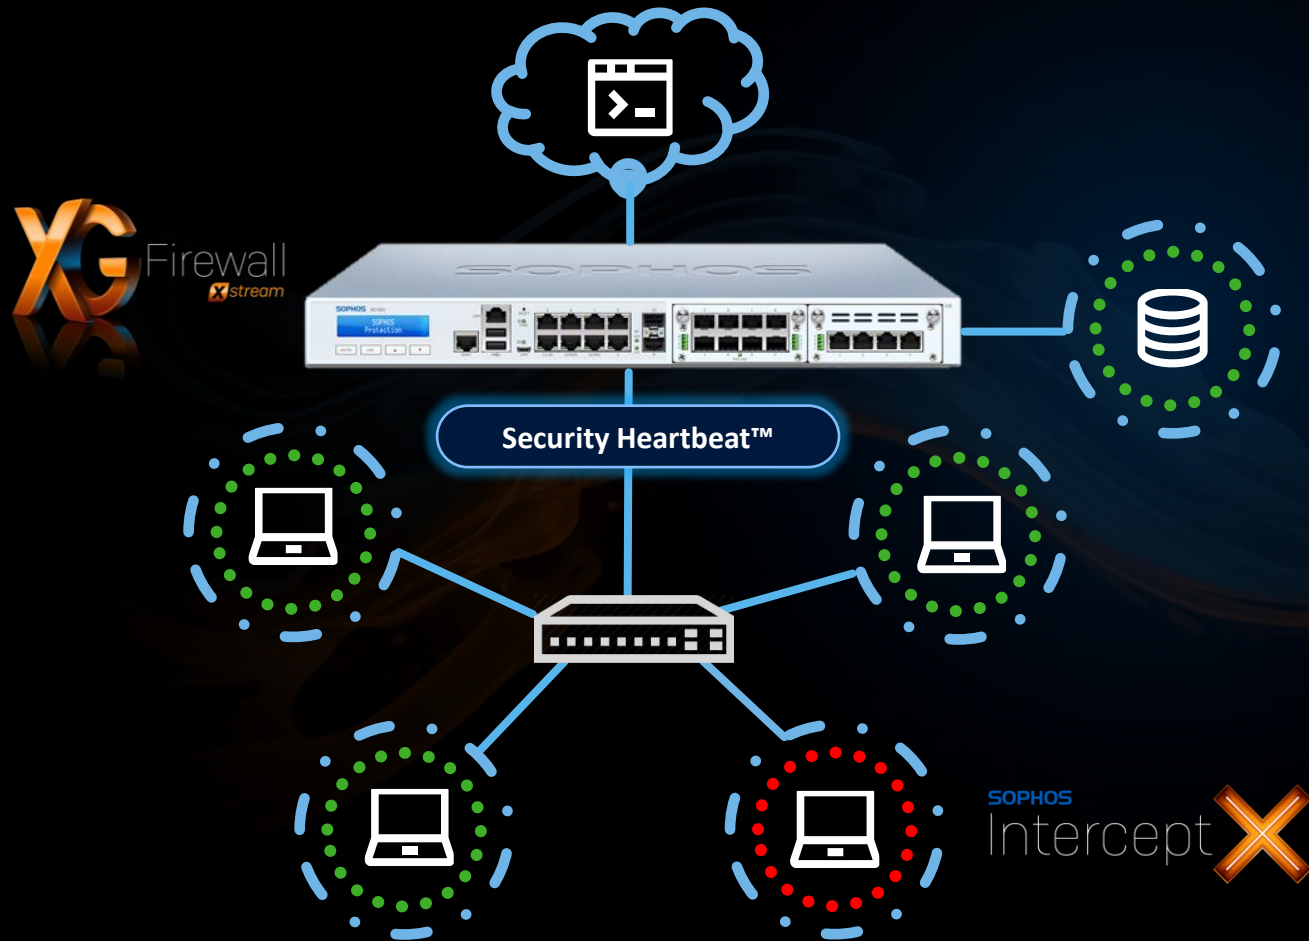

Clean-up

Sophos Endpoint automatically cleans up the infection. Once the malware is removed, Sophos Endpoint shares this update with the cybersecurity system

Synchronized Security Heartbeat

Automatic Response to Threats and Breaches

Synchronized Application Control

On this page you can modify application details for applications discovered with Synchronized Security from Sophos managed devices. You can change the name and category for the applications, information for some applications is already provided automatically from Sophos. You can use these applications in the overall application control feature on XG Firewall or you can directly assign the discovered applications to application filters to control the applications.
